Odhiambo Ronnie Jeff

JUNIOR DEVOPS ENGINEER

jeffr6705@gmail.com
+254 740 482 628
Kisumu, Kenya
github.com/rjeff-sudo
dev.to/rjeff-sudo
linkedin.com/in/rjeff-sudo

SKILLS

Languages	Go, Bash, PHP, JavaScript
Networking	TCP/IP, DNS, ARP, Port Scanning, Network Monitoring, Packet Capture
DevOps	Docker, Containerization, CI/CD Principles, Infrastructure Automation
Databases	PostgreSQL, SQLite
Systems	Linux (Ubuntu), Git, GitHub

EDUCATION

Software Engineering Bootcamp
Zone01 Kisumu
2026 to Present

BSc Communication and Computer Networks
Technical University of Kenya
March 2026

KCSE
Lenana School, Nairobi

CURRENTLY LEARNING

- Cisco CCNA (self study)
- PostgreSQL in Docker
- Terraform basics
- Daraja API (M Pesa)

ABOUT ME

Ambitious Junior DevOps Engineer with a BSc in Communication and Computer Networks. I am driven by a deep interest in the infrastructure layer of software — the part that keeps systems running, visible, and secure. I build in Go, think in networks, and want to spend my career automating, monitoring, and hardening the systems that modern businesses depend on. Currently deepening expertise in containerization, CI/CD pipelines, and cloud infrastructure while completing a DevOps specialisation at Zone01 Kisumu.

PROJECTS

Port Scanner and Network Monitor

Go | github.com/rjeff-sudo/port-scanner

- Built a concurrent TCP port scanner in Go using 200 or more goroutines that scans a full /24 network in under 10 seconds with service banner grabbing and reverse DNS lookups
- Extended into a continuous network monitor that detects real time changes — new devices, lost devices, port state changes — and persists state to JSON across sessions
- Functional equivalent of Nmap and Nagios/Zabbix, built from scratch with zero external dependencies

SentinelKE: Network Security Platform for Kenyan SMEs

Go, PHP | github.com/rjeff-sudo/sentinelke | In Progress

- Two layer platform: a Go scanning agent and a PHP dashboard that delivers security intelligence in plain Swahili for non technical SME owners
- Validated on live networks: detected exposed MikroTik routers, decade old Ruckus firmware, unencrypted admin panels, and 12 previously unknown devices
- Targets M Pesa agents, boda boda saccos, and farming cooperatives — sectors with real infrastructure but zero IT capacity
- Compliant with Kenya's Computer Misuse and Cybercrimes Act through a deployed in network agent model

DEVOPS FOCUS AREAS

- Infrastructure Automation and Scripting
- Container Orchestration with Docker
- CI/CD Pipeline Design and Implementation
- Network Security and Infrastructure Monitoring
- Cloud Infrastructure (AWS and GCP)
- Site Reliability and High Availability Systems
